

MINI EXCAVATORS

TOOLING FOR VACUUM TECHNOLOGY

Mini Excavators for suction works from a safe distance with the use of:

- Suction Excavators;
- Vacuum Truck;
- Industrial Aspirators;
- Dust Aspirators;
- Every Suction Machine, with every suction hose diameter.

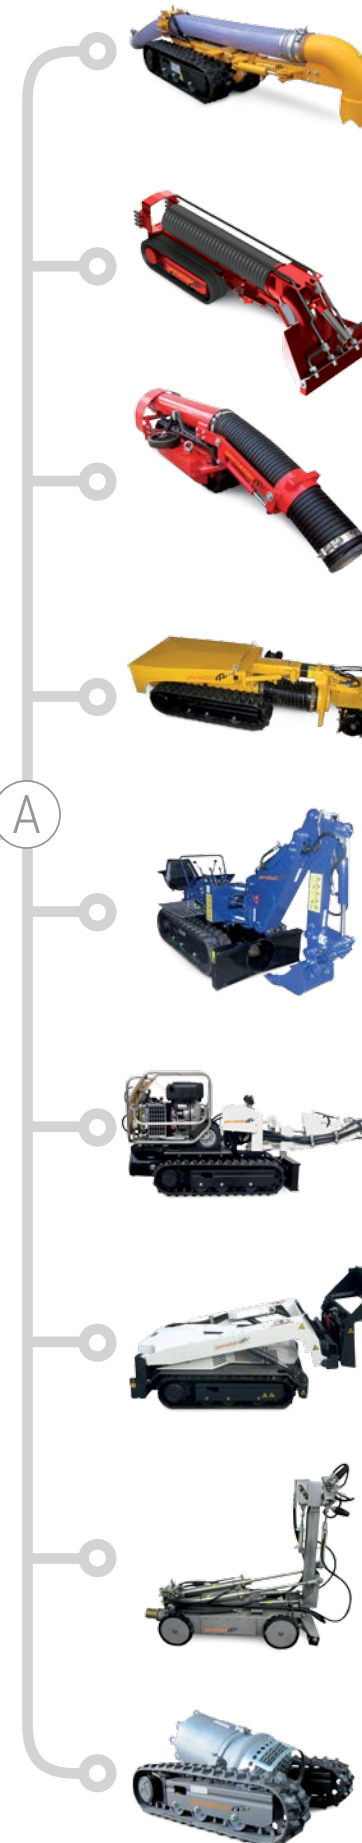

The Gerotto Mini Excavators are the result of a long and international experience in the aspiration field, with the Made in Italy Intelligence and Production. They can be used as accessorizes for Suction Excavators, Industrial Aspirators and Dust Aspirators. They are remote controlled and they give their best in the material removal in safety conditions.

All Mini Excavators are able to bring the suction hose of the suction machine into the dangerous area to remove the material, or to move it from an A to a B point during heavy operations.

Example of Mini Excavator connected to a Suction Excavator

LOMBRICO

Double Tracked Mini Excavator, hydraulically driven from a power pack and controlled through a hydraulic manual manifold.

Suitable for under conveyor cleaning operations, in mining industry and for confined spaces activity.

LOMBRICO ATEX

Double Tracked ATEX Certified Mini Excavator hydraulically driven from a power pack and controlled through a hydraulic manual manifold.

Reliable for cleaning and remediation in confined spaces operations, with presence of gas and dust, or in under explosion risk and contaminated areas.

LOMBRICO 500 Recycla

Single Tracked Mini Excavator with lateral stabilisers.

Designed for recycling technology and ducts and sewers cleaning operations.

BRUCO RC

Double Tracked Mini Excavator hydraulically driven from a power pack and Remote Controlled.

Suitable for under pipes cleaning operations, under conveyors material removal and drilling operations.

GATTO

Double tracked Mini Excavator equipped with a hydraulic power arm and a suction hose for material removal.

Suitable to work in confined spaces as underground pipes and syphons.

GATTO RC

Totally Remote Controlled Double tracked Mini Excavator equipped with a hydraulic power arm and a suction hose for material removal.

Suitable to work in construction and remediation field, moreover in confined spaces as underground pipes and syphons.

DOZER RC

Totally Remote Controlled Mini Loader, suitable for loading, movimentation and unloading of heavy material.

Suitable for working in Mining and Aluminium Industries. It can be used in confined spaces or hazardous areas, for cleaning under conveyor belts and big tanks.

FTC/NME

ATEX Zone 0 Certified Remote Operated Robot with high pressure water cleaning system created for the removal and the aspiration of oils through special chemical products.

Developed for Underground Tanks Cleaning.

ROV-UNDERWATER

Double Tracked Underwater Robot created for debris removal.

It has been projected and developed for debris removal in low-flow basin, separation tanks, big channels ecc.
